STREETLIGHTDATA

Join The StreetLight Data Team

At StreetLight Data, we are transforming transportation and urban planning with Big Data.

Our analytics answer an important question: Where do people go? This question is often impossible to answer with traditional research methods, but the answers are vital to building sustainable, livable, and successful communities.

Our technology transforms anonymous, archival location data from millions of mobile devices into useful Metrics that describe travel patterns. We are the first company to provide mobility analytics as a subscription service via an easy-to-use platform, StreetLight InSight®. *StreetLight InSight* informs high-value, long-term decisions that profoundly impact our everyday lives.

We support all types of urban and transportation planning projects, from subway line extensions and highway expansions to bike and pedestrian infrastructure.

We have 3 positions currently open in Canada.

Software Engineer / Senior Software Engineer (Vancouver)

StreetLight Data is seeking a high caliber software engineer to be part of our growing team. This team member will work on both the frontend and backend of the *StreetLight InSight* SaaS web application that our subscription customers use to explore and visualize travel patterns in the real world.

Territory Sales Representative (Vancouver or Calgary)

The Territory Sales Representative will identify and sell to new Engineering customers in the transportation and urban planning industries. The Territory Sales Representative has a proven track record of successfully achieving and surpassing quota goals, and has demonstrated success at identifying new, high-value opportunities. Previous experience selling to engineering, construction, transportation, and/or government agencies is desired.

Transportation Solution Engineer (Ottawa, Kingston or Greater Toronto Area)

The Transportation Solution Engineer will work together with the Strategic Account Representatives to identify, sell to, and support new customers in the transportation and urban planning industries. The Transportation Solution Engineer will have strong data analysis skills and be comfortable presenting to large audiences. Previous experience working in engineering, construction, transportation, government agencies, and/or architecture is desired. Candidates for this position must be fluently bilingual (E/F).
