

BIO

Atif Khan

Atif Khan, P.Eng, has been involved in the transportation industry for over 10 years. He is an electrical and computer engineering graduate from UBC. Atif has diverse experience in hardware design, manufacturing, software development and systems design for the transportation industry. He has worked both in private and public sector and led several complex projects such as speed-sensitive signals, various ATMS (advance traffic management systems) deployment, connected vehicles, EV Chargers, lane reversal systems, communication network designs, emergency pre-emption and transit signal priority systems, incident detection and notification systems, smart-cities and real-time data collection and management. Currently, he is working for the District of North Vancouver as an ITS engineer where he focuses on improving transportation network performance and safety by incorporating cutting edge technology into transportation operation.
