

Craig Kummer

Craig Kummer is the Director of Transportation Services with the City of Burlington and brings over 22 years of public sector experience in the Transportation Industry. Since joining the City of Burlington in 2021, Craig has provided oversight to the City's Integrated Mobility Plan, Transit Signal Priority Program, and is an active member of the City's 5G engineering working team.

Prior to Burlington, he worked for the City of Brampton. Here he oversaw the implementation of many citywide initiatives including the oversight of one of the province's largest Automated Speed Enforcement programs and the implementation of the City's Active Transportation Master Plan. He was an active member of the City of Brampton's Smart City Team and the Hurontario Light Rail Transit Transportation Management Committee providing guidance and insight related to transportation issues.

Craig is a graduate of the Transportation Engineering Technology Program from Mohawk College and has completed a number of management certificates throughout his career.

Craig has been a Director with ITS Canada since 2019, where he participated in the creation of the 2020-2025 ITS Canada Strategic Plan along with the organization's Vision and Mission statements. Recently, Craig was asked to join the Member Services Committee to help increase the membership of the organization and is seeking re-election to continue to work with this committee over the next term.

Apart from his interest for all things that are traffic, Craig is passionate about "giving back"—to the environment, communities, and individuals—and as a Board Member for ITS Canada, he will do just that. He will strive to "give" to the future generations of the Transportation Industry—to foster development and success.
