### **John Horner**

John Horner offers a rare combination of experience in Mobility as a Service (MaaS), transportation systems engineering, Intelligent Transportation Systems (ITS), software development, software engineering and systems integration. He focuses on architecting advanced solutions to transportation operations problems using the latest technology. His background in software development gives him strong insight into the technical details underlying transportation operations systems. In his current role as National Practice Lead for Urban Mobility at Kapsch, John works with agencies to design MaaS solutions to solve regional mobility problems. He has also served as the technical lead or software system designer for weather responsive decision support systems, truck parking management systems, advanced traveler information systems, condition reporting systems and many systems integration projects.
